Abstract
This paper describes a preliminary investigation into Chinese non-sentential utterances (NSUs) in a corpus of spoken Mandarin. It presents, with examples, a corpus-based taxonomy of Chinese NSUs. This taxonomy builds on the one by Fernández and Ginzburg for English NSUs in the British National Corpus (BNC) [1]. Partly due to the distinctiveness of spoken Chinese, eight new classes are added and their reasons for addition are explained. The paper concludes with discussions for future work.

Key Words- Dialogue, Non-sentential utterances, Corpus analysis, Spoken Chinese

1. Introduction

Dialogue is full of fragmentary utterances which are incomplete sentences but nevertheless convey a complete sentential meaning in the given context. These utterances are called non-sentential utterances (NSUs) in the literature (see, e.g., [1], [2], [3] and [4]). In recent years, these frequently occurring NSUs, whose meaning being highly context dependent, have drawn the attention of researchers, especially those in the field of computational dialogue systems, for the reason that these NSUs can provide us with various clues to the structure of context. In fact, based on an investigation into NSUs in the British National Corpus (BNC), Ginzburg has developed a theory of meaning for spoken interaction which is basically a theory of dialogue context [3]. Building on the work by Fernández and Ginzburg on English NSUs in the BNC [1], this paper describes a preliminary investigation into Chinese NSUs in a corpus of spoken Mandarin. This paper is structured as follows: Section 2 introduces the NCCU Corpus of Spoken Mandarin, the corpus we used in this research. Section 3 presents, with examples from the corpus, our corpus-based taxonomy of Chinese NSUs and explains the reasons why several new classes which are not in the taxonomy by Fernández and Ginzburg for English NSUs in the BNC (called, henceforth, the FG taxonomy) are added. Section 4 concludes the paper with discussions for future work.

2. The NCCU Corpus of Spoken Mandarin

While there are many spoken English corpora which have been established for different research and educational purposes, there are few spoken Chinese corpora. The NCCU Corpus of Spoken Chinese, which is established and maintained by the National Chengchi University (NCCU), Taiwan, is a project of language documentation whereby open online access to data of three major dialects of Chinese, namely, spoken Mandarin, spoken Hakka, and spoken Southern Min, are provided for non-profit-making research [5]. In the research reported in this paper, we used only the Mandarin sub-corpus of this NCCU Corpus, which is called, henceforth, the NCCU Corpus of Spoken Mandarin (NCCUCSM) and is available on the web at http://140.119.172.200/. The spoken data of NCCUCSM are mostly in the form of spontaneous face-to-face conversations. The data we used for this research are the first 10 conversations which are available for free. These 10 conversations are among college students who knew each other, totaling about 3.5 hours. Table 1 below, from [5], is a list of these 10 conversations (named M001-M010) with the information about the participants (F = Female, M = Male) and the length of the texts (in minutes, in number of turns, and in number of Chinese characters).

3. A Corpus-based Taxonomy for Chinese NSUs

Our taxonomy of Chinese NSUs is built on the FG taxonomy of English NSUs [1]. However, due to the fact that Chinese is distinctly different from English (see, e.g., [6] and [7]), it is reasonable to expect that our taxonomy of Chinese NSUs contains modifications to the FG taxonomy of English NSUs. The issues here concern the definition of “predicate” in these two different languages. As defined in [3], non-sentential utterances (NSUs) are "utterances without an overt predicate" (p. 2). In contrast to English, in which only verb phrases can act as predicates, there are non-verb predicates, besides verb predicates, in Chinese. Specifically, a Chinese predicate can be either a verb phrase, a noun phrase, an adjectival phrase or even a subject-predicate phrase itself (see, e.g., [7]). Consequently, a Chinese utterance containing no verb cannot, by itself, be a sufficient condition for being counted as an NSU, for it may have other kinds of predicates. For example, the following two Chinese utterances are not NSUs as each of them contains an overt (non-verbal) predicate.

A Chinese utterance with a nominal predicate:
我 二十二歳
wo3 er4shi2er4sui4
1SG twenty-two-years-old
'I was twenty two.' [NCCUCSM 6: 506]

A Chinese utterance with an adjectival predicate:
二十歲 非 年輕
er4shi2sui4 hen3 nian2qing1
twenty-years-old very young
'Twenty years old is very young.' [NCCUCSM 6: 453]

Here we use "NCCUSM C:L1-L2" or just "C:L1-L2" to indicate that the example is taken from lines L1-L2 of Conversation M00C of NCCUSM. On the other hand, there is a much more critical issue concerning whether Chinese modals are verbs. This issue is still highly controversial, as Huang et al. [8] point out, "While the basic distinction between nouns and verbs is universally recognized in modern literature on Chinese syntax, scholars differ, sometimes drastically, on other categories" (p. 9). In particular, there is still no consensus on whether Chinese modals are verbs. In the literature, there are three common views on the categorization of Chinese modals: (1) Chinese modals are verbs; (2) Chinese modals are adverbs; and (3) Some Chinese modals are verbs, some are adverbs and some are both [9]. In this research, we follow [8], [10], [11], [12] and others in treating Chinese modals as verbs. Note that this is a critical decision as it leads to the addition of new NSU classes to our taxonomy which are not in the FG taxonomy. The reason for this addition is that in Chinese, to answer a polar question positively is by way of repeating the verb in the question (or negatively by repeating the verb with a negation adverb). Since we treat Chinese modals as verbs, there are two kinds of verbs: lexical verbs and modal verbs. In case that the verb being repeated is a lexical verb, the answer is not an NSU because the lexical verb (or the verb plus the negation adverb) itself constitutes a complete (verbal) predicate. For example,

A: 你 還 記得 喔
ni3 hai2 ji4de2 o
2SG still remember QST
'Do you still remember?'

B: 記得 啊
ji4de2 a
remember PRT
'I remember.' [NCCUCSM 5: 210-211]

By contrast, in case that the verb being repeated is a modal verb, the answer is an NSU because the modal verb, with or without a negation adverb, is an incomplete (verbal) predicate. For example,

A: 那個 真的 會 睡著 嗎
na4ge zhen1de hui4 shui4zhao2 ma
that really will sleep:RESULT QST
'Does it really make people sleepy?'

B: 會
hui4
right
'Right.' [NCCUCSM 6: 109-110]

It therefore follows that not containing a verb can neither be a sufficient nor a necessary condition for a Chinese utterance to be classified as an NSU. Not sufficient, because in Chinese there are non-verbal predicates; not necessary, because an utterance containing a modal verb can also be classified as an NSU. In order to distinguish these verb-containing NSUs from those which contain no verb, two new classes, namely Verbal Affirmative Answer and Verbal Rejection are added to our taxonomy. Apart from these two, we have also added six more new classes, namely, Helpful Acknowledgement, Helpful Affirmative Answer, Correction, Noun Phrase, Re-Affirmation and Interjection. Empirical evidence, i.e., examples from the corpus, for these NSUs is provided in the following subsections. Table 2 below is our taxonomy of Chinese NSUs. There are totally 23 classes of NSUs which are grouped under four categories: (1) Acknowledgement, (2) Questions, (3) Answers, and (4) Extension Moves. In the following, we describe each NSU class and illustrate it with an example from NCCUSM.

| 21 Factive Modifier             |                              |                                                                             |
| 22 Bare Modifier Phrase         |                              |                                                                             |
| 23 Conjunction + Fragment       |                              |                                                                             |

### 3.1 Acknowledgement

There are 3 classes of Acknowledgement.

**(1) Plain Acknowledgement** signals understanding or acceptance. E.g.,

A: 没办法 mei2ban4fa3
   NEG:way 'Nothing we can do.'

B: 对呀 dui4 ya right PRT 'Right.'

**(2) Repeated Acknowledgement** is an acknowledgement containing verbatim repetition of a previous utterance. E.g.,

A: 所以 是 一个 马屁 大会 suoy2yi3 shi4 yi2ge ma3pi4 da4hui4
   so COP one fawn-conference 'So, it's a fawning conference.'

B: 对 马屁 大会 dui4 ma3pi4da4hui4
   yes fawn-conference 'Yes. It is a fawning conference.'

**[4: 190-191]**

---

**3.2 Questions**

There are 5 classes of Questions.

**(4) Classification Ellipsis** is a reprise fragment used to clarify not fully comprehended utterance. E.g.,

A: 那个 要 熬 .. 熬 就 好 了 na4 ge yao4 shan4 shan4 ji4u4 hao3 le
   that CL have-to boil then OK PRT 'That one has to be boiled. Just boil it.'

B: 熬 喔 shan4 o
   boil PRT 'Boil?'

**[5: 197-198]**

**(5) Sluice** is a bare question-denoting wh-phrase. E.g.,

A: 我 就 共 你 偷 囤 gua2 to7 ka7 li2 thau1 khng3
   1SG will give 2SG stealthily put 'I will stealthily put things into the pot.'

B: 何 物 siann2 mih1
   what 'What are you putting?'

**[5: 2-3]**

**(6) Noun Phrase** is a question containing only noun phrase(s). E.g.,

A: 看 到 兩 個 學 生 手 手 手 kan4 dao4 liang3 ge xue2sheng1 shou3 cai2 shou3
   see:RESULT two CL student hand hold hand 'I saw two students in my class walking hand in hand.'

B: 男 的 女 的 nan2 de nv3 de
   boy girl 'The boy and the girl.'
3.3 Answers

There are 12 classes of Answers.

(9) **Short Answer** is an answer-conveying NSU to a wh-question. E.g.,

A: 附中現任第幾志願
fu4zhong1 xian4ren di4ji3 zhi4yuan4
affiliated-high-school now what-ranking choice

B: 第三
di3 san1
'third'

A: 他們覺得那個漂亮哦
ta1men jue2 de ne4 ge piao4 liang4 o
3PL think that CL beautiful QST

B: 對
dui4
'right.'

(10) **Affirmative Answer** is a positive answer to a polar query. E.g.,

A: 我不太記得
wo3 bu2 tai4 ji4de2 le
1SG NEG quite remember PRF

B: 你少裝
ni2 shao3 zhuang1
2SG NEG pretend

A: 真的
zhen1de
really

B: 對
dui4
'really.'

(11) **Repeated Affirmative Answer** is an affirmative response with repetition. E.g.,

A: 是這張
shi4 zhe4 zhang1
COP this CL

B: 這張
zhe4 zhang1
this CL

A: 那個真的會睡著嗎
na4ge zhen1de hui4 shui4zhao2 ma
that really will sleep:RESULT QST

B: 會
hui4
right

A: 我不記得了
wo3 bu2 ji4de2 le
1SG NEG quite remember PRF

B: 你少裝
ni2 shao3 zhuang1
2SG NEG pretend

(12) **Verbal Affirmative Answer** is an affirmative response which contains just a modal verb. E.g.,

A: 那個真的會睡著嗎
na4ge zhen1de hui4 shui4zhao2 ma
that really will sleep:RESULT QST

B: 會
hui4
right

(13) **Helpful Affirmative Answer** is an affirmative response providing additional information. E.g.,

A: 你們實習老師也會
ni3men shi2xi2lao3shi1 ye3 hui4 hua4
2PL intern-teacher also will draw

B: 很多
hen3duo1
very

(14) **Re-Affirmation** affirms the truth of a previous utterance. E.g.,

A: 我不太記得
wo3 bu2 tai4 ji4de2 le
1SG NEG quite remember PRF

B: 你少裝
ni2 shao3 zhuang1
2SG NEG pretend

A: 真的
zhen1de
really

B: 對
dui4
'really.'

(15) **Rejection** is a negative answer to a polar query or an assertion. E.g.,

A: 你有加重他們的負擔嗎
ni2 you3 jia1zhong4 ta1men de fu4dan4 ma
2SG have increase 3PL POSS burden QST
'Did you increase their burden?'
B: 沒有
mei2you3
NEG
'No.'

(16) **Verbal Rejection** is a negative answer to a polar query or an assertion which contains just a modal verb with a negation adverb. E.g.,

A: 會不 會 是 你 老母
hui4bu2hui4 shi4 ni2 lau7bu2
will:NEG:will COP 2SG mother
'Could it have been your mother?'
B: 不 會 吧
bu2 hui4 ba
NEG will PRT
'No.'

(17) **Helpful Rejection** is a negative answer with an alternative to a polar query or an assertion. E.g.,

A: 你們 只 有 一 次 總 複習 喔
ni3men zhi3 you3 yi2 ci4 zong3fu4xi2 o
2PL only have one time overall-review PRT
'You only do an overall review once, right?'
B: 兩 次 啦 兩 次
liang3 ci4 la liang3 ci4
two time PRT two time
'Twice. Twice.'

(18) **Correction** is the corrected version of the faulty part of a previous utterance. E.g.,

A: 他不怒 不怒 自 [ 威 ]
ta1 bu2nu4 bu2nu4 zi4 wei1
3SG REPAIR NEG:angry:SELF:majestic
'He's not angry...charismatic without being angry.'
B: [而威]
er2wei1
'but majestic.'

(19) **Interjection** is an abrupt expression for sudden sensations and emotions. E.g.,

A: 就 沒辦法 啊
jiu4 mei2ban4fa3 a
PRT NEG:way PRT
'Nothing I can do.'
B: 喔
o
BC

'Oh.'

(20) **Propositional Modifier** is a propositional adverb that can convey a complete message in the context. E.g.,

A: 喔 應該 都 有 問題 啦
o ying1gai1 dou1 you3 wen4ti2 la
PRT should all have problem PRT
'They should have problems.'
B: 可能 吧
ke3neng2 ba
probably PRT
'Probably.'

3.4 Extension Moves

There are 3 classes of Extension Moves.

(21) **Factive Modifier** is an evaluative adjective. E.g.,

A: 然後 NB 可以 帶 回 家
ran2hou4 NB ke2yi3 dai4 hui2 jia1
then notebook can take back home
'They can take the laptop home with them.'
B: 好好
hao2hao3
good
'That's really good.'

(22) **Bare Modifier Phrase** is an adjunct that can modify a previous utterance in the context. E.g.,

A: 我 現在 別人 大聲 我 會 比 他 更 大聲 的 那 一 種
wo3 xian4zai4 bie2ren2 da4sheng1 wo3 hui4 bi3
1SG now other-person loud 1SG will COMPARE
3SG even loud ASSC that one kind
'Now, I am the kind of person who, when other person is loud, will be even louder.'
B: 人生 磨練 之後
ren2sheng1 mo2lian4 zhi1hou4
life train after
'AFTER training in life.'

(23) **Conjunction + Fragment** consists of a connective which introduces a fragment. E.g.,

A: 我 現在 別人 大聲 我 會 比 他 更 大聲 的 那 一 種
wo3 xian4zai4 bie2ren2 da4sheng1 wo3 hui4 bi3
1SG now other-person loud 1SG will COMPARE
3SG even loud ASSC that one kind
'Now, I am the kind of person who, when other person is loud, will be even louder.'
B: 人生 磨練 之後
ren2sheng1 mo2lian4 zhi1hou4
life train after
'AFTER training in life.'

(23) **Conjunction + Fragment** consists of a connective which introduces a fragment. E.g.,

A: 蠻 瘦 的
man2 shou4 de
quite thin PRT
'He's quite thin.'
B: 而且 高高 的
er2qie3 gao1gao1 de
4. Conclusions and Future Work

This paper describes a preliminary investigation into Chinese non-sentential utterances (NSUs) in the NCCU Corpus of Spoken Mandarin. In particular, it presents, with examples from the corpus, a corpus-based taxonomy of Chinese NSUs. Although this taxonomy is built on the FJ taxonomy - the taxonomy by Fernández and Ginzburg for English NSUs in the British National Corpus (BNC), several new classes are added. The reasons for the addition have been explained by appealing, in part, to the distinctiveness of spoken Chinese. In the future, we plan to test this taxonomy with other Chinese corpora and on other languages. A recent work in this direction is by Floriane Guida who tests the FG taxonomy on French [13]. Another future work is to use this taxonomy as the basis for an interpretation module of a dialogue system building on, e.g., GoDiS [14], [15].
